

## #006f instructions to set up Wekinator for performance

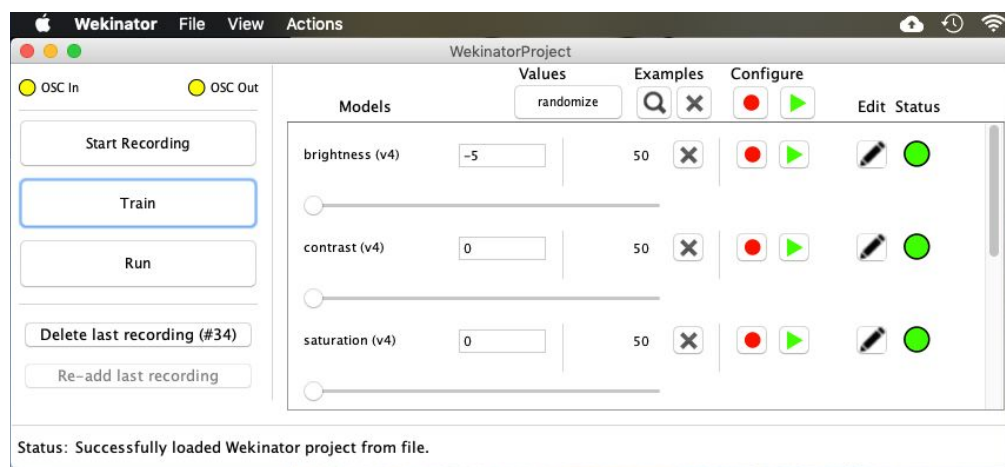

When you start Wekinator you will see this pop up box. You don't need to do anything here. Just go to File in the menu and select "Open project".

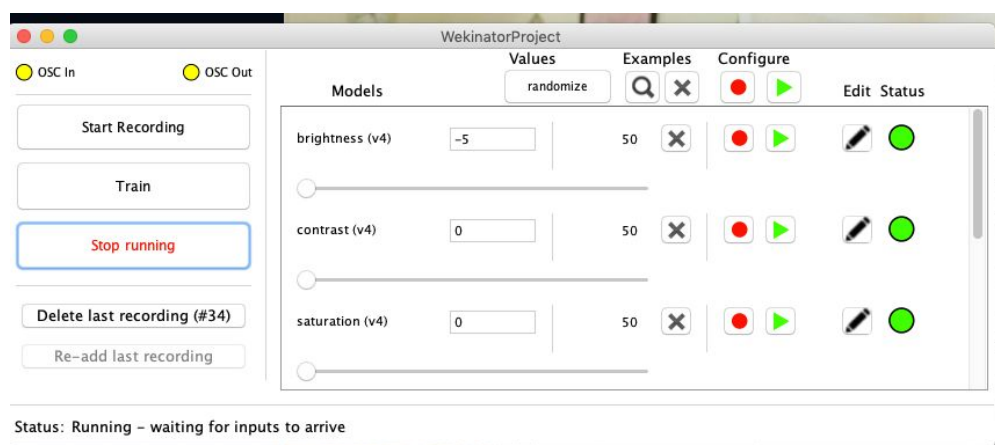

Navigate to the '00f6-master' file then to the 'wekMidi' file'. Inside that file, select the file "WekinatorProject.wekproj" then click open.

Wekinator will take you to this view. Now just click “Start listening.” Your port will be the default 6448. As shown above.

Now just click the ‘Run’ button. Don’t click anything else. The file should be running. If you have Max MSP open and already setup, when you press a key on your midi controller, you will see values change within the project. Have fun!

Lastly, when you want to stop the piece, just hit “stop running” and exit the program.
